HTTP Failures
0 reqs

Avg Response Time
7718 ms

95% Response Time
19398 ms

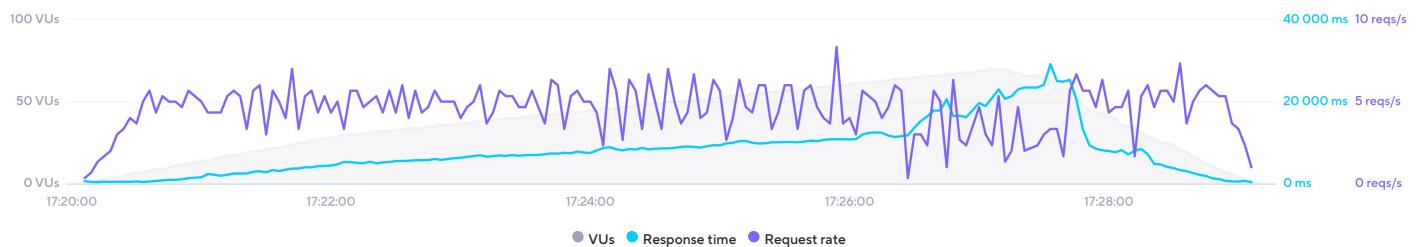

SUMMARY

This report summarizes a test run of the test "stress-test-wp.js". It was performed on November 23, 2023 and is considered to be successful.

The test was configured to run up to **70 VUs** for 9 minutes 30 seconds. A total of **2 446 requests** were made with a max throughput of **8.3 reqs/s**. The sections below give a more detailed breakdown.

PERFORMANCE OVERVIEW

The average response time of the system being tested was **7 718 ms** and **2 446 requests** were made at an average request rate of **4 requests per second**.

TEST OVERVIEW

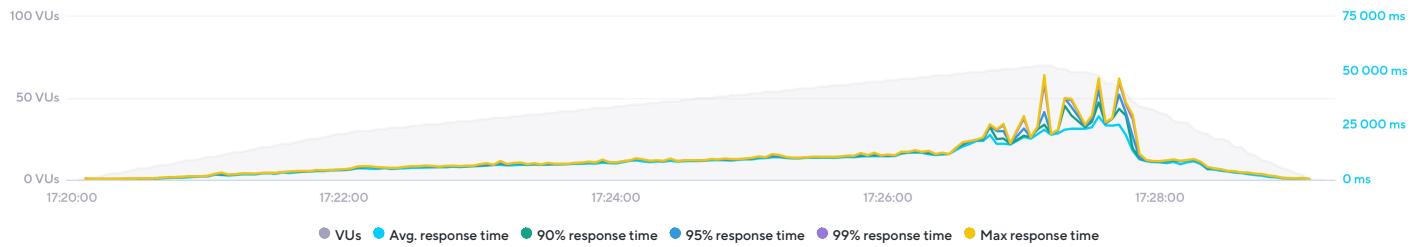

THRESHOLDS

The run met all of its performance expectations, with none of the defined thresholds having been exceeded.

THRESHOLD NAME	CONDITION	VALUE
http_req_failed:rate<0.01	rate<0.01	rate=0

RESPONSE TIME

The maximum response time was **48 085 ms** at **70 VUs**. The average response time at the same point in time was **22 977 ms**, with 95% of requests taking less than **31 092 ms**.

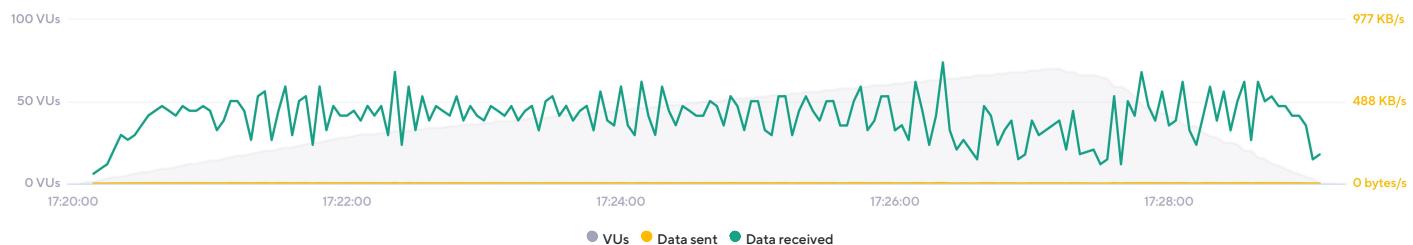

THROUGHPUT

The test had an overall average request rate of **4.5 reqs/s** peaking at **8.3 reqs/s** while running **60 VUs**.

BANDWIDTH

The amount of data sent peaked at **64 VUs**, sending **3.23 KB/s** of data. Data received had its peak at **64 VUs** with **722 KB/s** being received.

VOCABULARY

VUs

A Virtual User is a simulation of a real user making requests to the system. Multiple VUs are executed concurrently to simulate traffic to the website or API.

Throughput

The amount of transactions the system under test can process, showing the capacity of the website or application.

Checks

A check is an assertion that the system under test behaves correctly, e.g. that it returns the correct status code. They do not halt the execution of the test, but acts as a pass/fail metric.

Response Time

The time from sending the request, processing it on the server side, to the time the client received the first byte.

Latency

The time that data sent or received spends on the wire, i.e. from the start of data being transmitted until all the data has been sent.

Thresholds

Thresholds are a pass/fail criteria used to specify the performance expectations of the system under test.

ABOUT GRAFANA CLOUD k6

Grafana Cloud k6 is the modern performance testing platform that brings cross-functional teams together to prevent system failures and consistently deliver fast and reliable applications. For more information, visit <https://grafana.com/products/cloud/k6/>.
